Mentorship Planning
Fellow-to-faculty career planning is integral to the “Cardiovasology” Program, and is designed to:
- focus on career development
- facilitate transition from trainee to faculty
- and foster extramural funding earlier in a research career trajectory.

Key Outcomes
Key success of the training program and its mentorship guidance will be measured by trainee’s performance annually.

Trainee Outcomes
- Publishing two or more peer-reviewed papers per year of training
- Presentations at national meetings
- Submission of an NIH K series (e.g., K01, K08, K23, K99) grant or equivalent
- Summary of accomplishments with presentation of application for academic faculty positions
- Documentation of acquired skill sets including innovation/entrepreneurial know-how
- Success in post-training placement and academic advancement, including fellow-to-faculty transition, long-term record of extramural funding and leadership.

Candidate Information
Eligibility & Duration
The Postdoctoral NIH T32 Training Grant in “Cardiology” at Mayo Clinic is led by program director, Dr. Andre Terzic, and is offered for a minimum of 2 years and up to 3 years for qualifying U.S. citizens or permanent residents.

New Candidate Trainee Objectives
The goal of the “Cardiovasology” Training Program is to prepare trainees for future careers as independent, extramurally-funded investigators.

Training in the “Cardiovasology” Program offers:
• Rigorous, comprehensive and multidisciplinary curriculum with didactic education
• Hands-on training with an established investigator &/or investigative team
• Acquisition of proficiency in state-of-the-art technologies
• A customized experience with engagement in evolving areas of science to best equip and meet the career goals of the individual learner
• Attendance &/or contribution to educational activities such as:
  - Conferences, seminar series, grant writing, public speaking, responsible conduct of research and bioethics

Training Topics
Trainees engage in faculty-directed programs and acquire new skill sets that will differentiate them for long-term careers in cardiovascular science. Cross-departmental opportunities are coordinated within collaborative faculty projects. Multispecialty training experiences are deployed at various learner levels and rely on high-functioning teams to complement the ultimate learning experience.

How to apply for a “Cardiovasology” Training Slot
Trainee candidates formally apply for consideration through the Program Director/Associate Directors/Program Manager or directly through the Mayo Clinic Research Office. Applications, including the candidate’s credentials, will be pre-evaluated to ensure candidates meet criteria for consideration. The Program Director will submit nominations to the Executive Committee where it will undergo peer-review to determine suitability for appointment. The Executive Committee ranks candidates according to credentials and potential for independent research careers. Emphasis is placed on selection of candidates who have demonstrated commitment to academic research judged by scholarly record, quality publications in peer-reviewed journals, statement of career goals, letters of recommendation, and interview outcomes.

Selected candidates are offered two-year appointments with annual review. A third year can be extended subject to demonstrated productivity and competitiveness compared to the incoming candidate pool.

To facilitate applications the following avenues are available for candidates to inquire:
• A T32-dedicated external portal is available by the Office of Post-Doctoral Affairs at Mayo Clinic https://www.mayo.edu/research/training-grant-positions website.
• Nominations may also come from former clinical/research mentors, project supervisors, residency or fellowship program directors.

Candidates will be considered at various levels of their career trajectory and with various prior experiences provided that they have completed their respective graduate or medical training.
